Abstract of JP2002212370

PROBLEM TO BE SOLVED: To obtain a fluororubber vulcanization molded product with a slight increase in hardness and having excellent shock absorption and nontackiness by compounding a filler having a specific shape with a fluororubber.

SOLUTION: This fluororubber vulcanization molded product is obtained by carrying out vulcanization molding of a rubber composition comprising a filler having 1-50 μ m average particle diameter and ≥ 5 aspect ratio or a fibrous or a needlelike filler having 1-500 μ m average fiber length in an amount of 5-100 pts.wt. based on 100 pts.wt. of the fluororubber.
